What's the easiest way of adding an option for opening a "New Stylesheet" to the File > New submenu.

| File | Edit | Insert | Format | Cell | Graphics | Evaluation | Palettes | Window |

New ►
Open...   ⌘O
Open from Cloud...
Open Recent   ►
Close   ⌘W

Save...   ⌘S
Save As...   ⇧⌘S
Save to Cloud...
Publish to Cloud...
Save Selection As...

Do you *really* want to create a new stylesheet from scratch by means of such a File > New menu entry? Ordinarily, I think, folks create a new stylesheet by opening `Default.nb` (or perhaps, at a lower-level, `Core.nb`) from `$InstallationDirectory/SystemFiles/FrontEnd/StyleSheets`, modifying it, and saving it in `$UserAddOnsDirectory/SystemFiles/FrontEnd/StyleSheets`. — murray Feb 17, 2020 at 20:08 ✏

I do, I like to create new ones frequently and it would be very convenient! — M.R. Feb 20, 2020 at 17:57
